An Overview On
Forcep Jaw Types

You will see that forceps in our catalogue will have either a traditional serrated jaw or a different design which is known as atraumatic (or non-traumatic).

Traditional Serrated Jaw

The traditional serrated jaw is generally more robust and used on forceps where the areas are not as delicate.

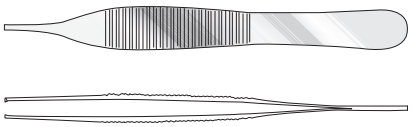

Atraumatic Jaw

Atraumatic jaws will be mainly found in delicate surgery areas such as vascular and cardiothoracic. The design is such, that the surface area gripped is reduced, ensuring less trauma without the loss of grip.

Choosing the most suitable needle size

Our tungsten carbide inserts are available in a variety of styles. Choosing the most suitable needle size for each procedure helps give the surgeon maximum grip and control.

Coarse 0.65mm
For powerful needle holder patterns and wire twisters. Maximum holding capabilities for heavy needles or wire.

Standard 0.5mm
Used, for example, in Mayo-Hegar, Mathieu Needle Holders. For needles 3-0 and larger.

Fine 0.4mm
For delicate needle holders such as Crile-Wood and DeBakey. For needles and sutures between 4-0 and 6-0.

Micro 0.2-0.3mm
For micro needle holders such as Castroviejo, Microvascular and Mini-Ryder. For delicate needles and sutures between 7-0 and 10-0.

Smooth
Smooth tungsten carbide surface reduces damage to delicate needles and suture of 6-0 and finer.

The difference between Monopolar Electrosurgery and Bipolar Electrosurgery

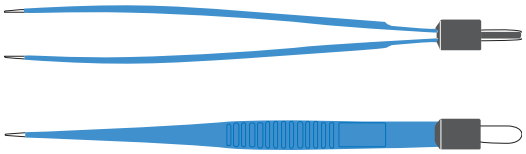

There is one basic difference between bipolar and monopolar techniques. With monopolar electrosurgery, a probe electrode is used to apply the electrosurgical energy to the target tissue to achieve the desired surgical effect. The current then passes through the patient to a return pad and then back to the ESU generator to complete the circuit.

With the bipolar electrosurgical method a bipolar device, often a set of forceps, is used. The electrical current passes from one side of the forcep, through the target tissue to the other side of the forcep, then back to the generator. The electrical current is restricted to the tissue between the forcep, therefore not requiring the use of a grounding pad.

Taking care of your instruments

It is really important to ensure your instruments remain safe.

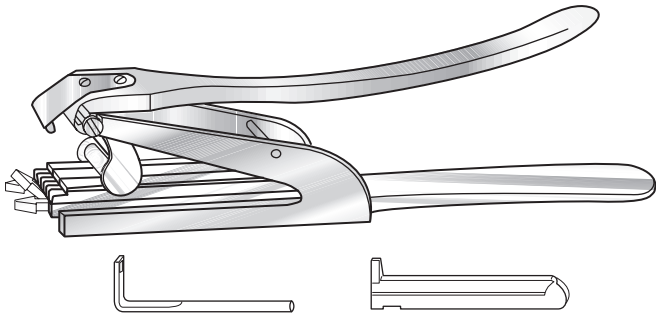

To do this, you will need a device which allows you to magnify distal areas of the instruments to check for:

• Burrs • Corrosion • Cracks

Refurbishment of orthopaedic sets

Refurbishing instruments can save up to **80%** of the cost of buying new, with compelling evidence to demonstrate effectiveness

Independent research[1] showed that instruments refurbished by Mavrix Instruments had a 4x reduction in the amount of residual protein.

The smooth and polished surface has an increased cleaning efficacy, and all refurbishments come with an 18 month warranty as standard. Standard turnaround times are 1 week and an express 2 day service is also available.

Artery Clamps

An Overview On

Atraumatic Jaws

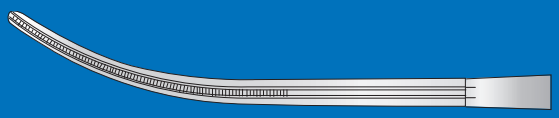

Also known as non-traumatic, atraumatic jaws will be mainly found in delicate surgery areas such as vascular and cardiothoracic. The design is such, that the surface area gripped is reduced, ensuring less trauma without the loss of grip.

Atraumatic jaws are available as straight or curved.

Special Care Needed For Your Thoracic Instruments

Staining

Beware of the use of Saline during surgery. This can be very damaging to any instrument if not immediately rinsed after surgery. Saline is highly corrosive. The image shows damage to the passive surface of an instrument.

Rusting

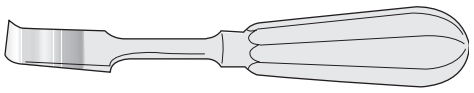

Due to the nature of their use, Thoracic Retractors can tarnish or present rust easily. These retractors can be fully refurbished and passivated by Mavrix Instruments.

Introducing the Bookwalter® Retractor System

The Bookwalter is widely used in Urology and General Surgery. The retractor is popular for Renal Transplant use and Radical Cystectomy (Bladder Removal).

Radical Cystectomy

Surgery to remove the urinary bladder. In men, removing the entire bladder (radical cystectomy) typically includes removal of the prostate and seminal vesicles. In women, radical cystectomy also involves removal of the uterus, ovaries and part of the vagina.

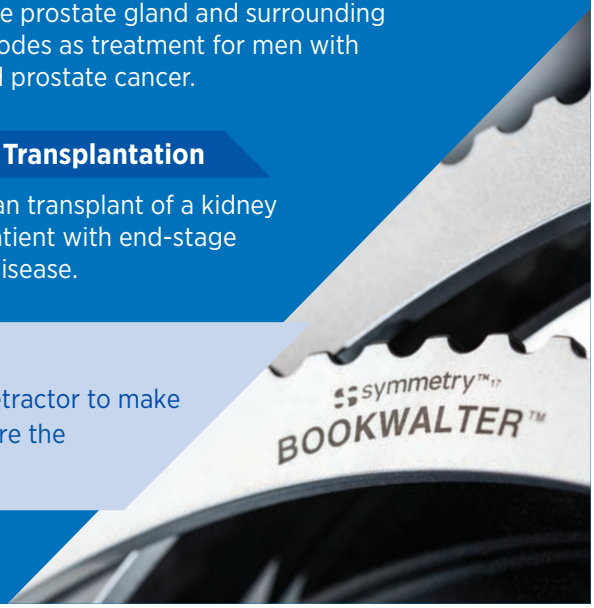

(Source: Mayo Clinic)

Prostate Removal

Radical prostatectomy is surgery to remove the entire prostate gland and surrounding lymph nodes as treatment for men with localized prostate cancer.

Renal Transplantation

The organ transplant of a kidney into a patient with end-stage kidney disease.

Own a Bookwalter® already?
Mavrix Instruments can Repair & Refurbish your current retractor to make it look as good as new. We will also perform tests to ensure the retractor is functioning correctly and provide a report.
